PROFESSIONAL SUMMARY

Senior Frontend Engineer with **4+ years** of experience building high-performance, production-grade web applications using **React.js** and **Vue 3**. Architected the AI chat interfaces for **ForgeAI**, an enterprise AI platform — built a multi-conversation streaming engine lifting concurrent live sessions from **1 → unlimited** and stream survival from **0% → 100%**. Collapsed **2 monolithic chat surfaces into 1 unified core**, shipped **10+ features** end-to-end, and drove performance wins including **70% bundle reduction** and **60% faster load times**. Dual React + Vue proficiency across enterprise ERP, data engineering, and AI products.

TECHNICAL SKILLS

Frontend: React.js, Next.js, Vue 3 (Composition API), TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Responsive Design, Cross-Browser Compatibility

State Management: Redux, Redux Toolkit, Context API, Pinia, Vuex

UI & Design Systems: Material UI, PrimeVue, Component-Driven Architecture, Reusable Component Libraries

Performance: Code Splitting, Lazy Loading, Virtual Scrolling, Bundle Optimization, Infinite Scroll, Vite, Webpack

Real-Time & Streaming: Server-Sent Events (SSE), WebSockets, Streaming UI Rendering, Real-Time Notifications

Backend & APIs: Node.js, Express.js, REST APIs, MongoDB, PostgreSQL

Testing & Tooling: Jest, React Testing Library, Vitest, Git, CI/CD (GitHub Actions), Agile/Scrum

WORK EXPERIENCE

Modak Analytics LLP | Hyderabad, India

Senior Frontend Developer – ForgeAI | Nov 2025 – Present

React.js, Vue 3, TypeScript, Composition API, Pinia, SSE, Tailwind CSS, Jest, React Testing Library, Vite, CI/CD (GitHub Actions)

- Architected and shipped a multi-conversation streaming engine as **sole frontend owner of the AI chat interfaces**, breaking a hard single-session bottleneck — lifting concurrent live AI conversations from **1 → unlimited** and stream survival across app navigation from **0% → 100%**, eliminating in-flight response loss.
- Drove a platform-wide refactor of the AI chat experience, collapsing **2 monolithic chat surfaces into 1 unified streaming core** with a shared composable library — cutting duplicated real-time logic by **50%** and reducing every future chat feature to a single-touch change.
- De-risked the platform's most complex feature by authoring a versioned design spec with a **full state machine, data-flow diagrams, and 17 pre-defined test scenarios** — shipping the streaming rewrite with **zero rollback** via incremental feature-flagged migration.
- Slashed initial chat-load cost on heavy conversations by replacing all-at-once history rendering with **incremental pagination + scroll-up lazy loading** — reducing bundle size by **70%** and improving load times by **60%**.
- Shipped **10+ user-facing capabilities** end-to-end — including Git-style conversation branching, slash-command palette, read-only access controls, chat sharing, and custom instruction layers — owning each from design through production.
- Engineered a **real-time job-monitoring system** with conversation-scoped visibility and background polling surviving route changes, delivering **100% of terminal-status outcomes** (success/error/timeout) as live notifications — eliminating the need for users to babysit long-running data jobs.
- Hardened streaming reliability with **heartbeat keep-alives and timeout recovery**, resolving top user-blocking defects (tool-call render corruption, full-UI freezes on stream completion) that previously stalled the core chat loop.
- Built and deployed an internal **Chat UI Specialist AI agent** plus standardized engineering guidelines, scaling consistent frontend delivery and onboarding beyond a single contributor.

Senior Frontend Developer – Yeedu | July 2024 – Nov 2025

React.js, Vue 3, TypeScript, PrimeVue, Pinia, SSE, Chart Visualization, REST APIs, Vite, CI/CD (GitHub Actions)

- Built the frontend for Yeedu's **AI Assistant (AssistantX + Notebook AI)** with live **SSE response streaming**, syntax highlighting, and rich rendering of charts, tool-execution traces, and code output — shipping the platform's flagship AI capability and headline release differentiator.
- Drove a full **UI framework migration** to PrimeVue across **5+ core dashboards**, building a reusable component library (data tables, skeleton loaders, filters, validation) that cut UI development time by **~40%** and eliminated thousands of lines of duplicated code.
- Architected an end-to-end **file-management system** (hierarchical file-tree, URL-based navigation, rename, streaming uploads) with a reusable file-picker integrated across **6+ workflows** — collapsing a fragmented multi-screen flow into one unified experience.

- Re-engineered data-heavy views with **infinite scroll across 7+ components** and streaming uploads for **250+ file batches** — eliminating full-payload fetches and browser freezes on previously unresponsive pages.
- Owned **70+ feature stories** and resolved **55+ production bugs** over 13 months with **near-zero regression rate**, consistently shipping across Jobs, Billing, Import/Export, and Clusters while maintaining stability across **14 active release branches**.
- Delivered **Unity Catalog and Catalog Explorer** integration (view/edit modes + secure metastore-secret editing), extending the platform's data-governance surface and unblocking enterprise customer adoption.

Epsilon Infinity Services | Hyderabad, India

Frontend Developer | May 2022 – July 2024

React.js, JavaScript (ES6+), TypeScript, Redux, Node.js, Express.js, MongoDB, PostgreSQL, WebSockets, Jest, REST APIs

- Developed and shipped **2 production applications** for **Epsilon Diary**, a multi-school management ERP handling attendance, timetables, exams, and fees — the student-facing platform and an internal admin portal for cross-school operations monitoring and access control.
- Built **8+ reusable UI components** adopted application-wide across the ERP, and optimized data-heavy views (attendance records, fee ledgers, exam results) with **virtual scrolling and dynamic rendering** — achieving **30–40% faster UI performance** on large datasets.
- Developed a **real-time analytics admin dashboard** with **40+ REST APIs** (Node.js/Express), monitoring school activities, monetary transactions, enrollment trends, and client requests — with a **role-based access management system** controlling teacher and principal permission tiers across schools.
- Implemented a **WebSocket-based real-time notification system** replacing manual checks and email-based alerting, delivering instant updates for critical admin events and **eliminating manual monitoring overhead** across the platform.

EDUCATION

M.Tech, Mechanical Engineering | Chandigarh University | 2021 – 2022

B.E, Mechanical Engineering | MVSR Engineering College | 2015 – 2019
