

Ekamruth Sarma Gangaraju

Hyderabad, India — +91 7780796542 — ekamruthgangaraju@gmail.com — [LinkedIn](#)

Professional Summary

Frontend Engineer with 4+ years of experience building scalable, high-performance web applications using **React.js** and **Vue 3**. Built production AI chat interfaces with real-time streaming, third-party service integrations, and complex data visualization for enterprise platforms. Proven track record of reducing bundle size by 70%, improving load times by 60%, and eliminating code duplication by 40–70% in production environments. Specialized in component-driven architecture, performance optimization, and building maintainable frontend systems for complex enterprise workflows.

Skills

Frontend	React.js, Vue 3 (Composition API), JavaScript (ES6+), TypeScript, HTML5, CSS3, Responsive Design, Cross-browser Compatibility
Frontend Architecture	Component-driven architecture, Real-time streaming systems (SSE), AI chat interfaces, Performance optimization, State management
State Management	Redux, Redux Toolkit, Context API, Pinia, Vuex
UI Libraries	Material UI, PrimeVue, iViewUI
Performance	Lazy loading, Code splitting, Bundle optimization, Virtual scrolling, Infinite scroll, Route-level code splitting, Vite, Webpack
Backend & APIs	Node.js, Express.js, REST APIs, WebSockets, Server-Sent Events (SSE), MongoDB, PostgreSQL
Testing	Jest, Vitest, React Testing Library
Tooling	Git, CI/CD, Agile/Scrum

Experience

Software Development Engineer (Frontend)	—	Modak Analytics LLP, Hyderabad	July 2024 – Present
ForgeAI			Nov 2025 – Present

- Built and scaled a real-time AI chat platform with persistent multi-channel conversations, configurable third-party service connectors, and streaming response interfaces using modern component-driven frontend architecture.
- Developed reusable frontend systems for markdown rendering, syntax highlighting, structured tool outputs, and interactive code blocks, improving usability across complex technical workflows.
- Reduced code duplication by **40–70%** through modular reusable components and shared frontend abstractions, significantly improving maintainability and development velocity.
- Optimized application performance through route-level code splitting, lazy loading, and frontend rendering improvements, reducing bundle size by **70%** and improving load times by **60%**.
- Implemented centralized API request management with error handling and cancellation flows for long-running streaming operations, improving application stability and responsiveness.

Yeedu	July 2024 – Nov 2025
-------	----------------------

- Architected and developed a production-grade AI Assistant frontend with real-time **Server-Sent Events (SSE)** streaming, context-aware interactions, syntax-highlighted code rendering, and dynamic chart visualization.
- Improved debugging and incident resolution workflows by **30–40%** through contextual error analysis and real-time diagnostic tooling.
- Redesigned the secrets management system, reducing frontend complexity by **66%** while improving validation, usability, and workflow consistency.
- Architected and developed a comprehensive workspace file management system from the ground up, featuring Git-based version control workflows, optimized tree rendering for large directory structures, and responsive UI for enterprise-scale datasets.

Frontend Developer	—	Epsilon Infinity Services, Hyderabad	May 2022 – July 2024
--------------------	---	--------------------------------------	----------------------

- Developed scalable frontend applications using **React.js** and modern JavaScript (ES6+), building shared UI component libraries and reusable design abstractions for consistent, responsive interfaces across multiple applications.
- Optimized rendering performance for large datasets using virtual scrolling and dynamic rendering techniques, achieving **30–40%** faster UI performance.
- Integrated RESTful APIs and collaborated with backend teams to ensure reliable data flow and frontend responsiveness across production applications.

Education

M.Tech, Mechanical Engineering	—	Chandigarh University	2021 – 2022
B.E, Mechanical Engineering	—	MVSR Engineering College	2015 – 2019
